***Reasons for allowance***

The following is an examiner's statement of reasons for allowance:

The prior art of record fail to teach or suggest individually or in combination a method for load balancing for a plurality of graphics processors configured to operate in parallel, wherein the method identifies the uniquely distinct steps of: " determining, an imbalance between respective loads of two of the plurality of graphics processors based on a feedback data and, in response to detecting an imbalance, decreasing a size of a first portion of the display area that is rendered by a more heavily loaded one of the two graphics processors and increasing a size of a second portion of the display area that is rendered by the other one of the two graphics processors" (as per claims 1 and 19).

These distinct steps of the present claims invention have not found to be anticipated, suggested or made obvious by the prior art of record, either singularly or in combination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Morozumi (US Patent No. 6,570,571) taught an image processing apparatus and method for efficient distribution of image processing to a plurality of graphics processors.

Hartman (US Pub. No. 2004/0075623) taught a method and system for displaying images on multiple monitors.

Maida (US Patent No. 6,469,646) taught a multi-vision screen adapter.

Mun et al et al (US Patent No. 5,841,444) taught a multiprocessor graphics system.
